

Industry Tip

Expand Field size on Generic Authorization Searches

Date	Module/Application/Functionality	Notes
October 3, 2018	Well and Facility Infrastructure, Expand Field size on Generic Authorization Searches	5.16 Release

The field size on Generic Authorization Searches has been increased to 25 characters from 20. The former limit was preventing searches of Well Completions and Wellbores.

The screenshot displays the 'Other Authorization Search' interface. A callout box points to the search criteria field, indicating that it now supports up to 25 characters. The interface includes sections for 'Authorization Info' and 'Associated Entities'. In the 'Associated Entities' section, the 'Related To' dropdown is set to 'Wellbore', and the value 'SK WI 111020200304W200' is entered in the adjacent field.
