

## Industry Tip

### Land Location not in Pool Boundary Warning

Date	Module/Application/Functionality	Notes
October 3, 2018	Well and Facility Infrastructure, Incorrect validation message - Land location not in Pool boundary	5.16 Release

The functionality to determine if a well completion falls within the boundaries of a defined pool in which it is being licenced has been fixed. This functionality references the land locations listed in the pool boundary to determine if the proposed completion matches the target pool. If the system believes the pool is incorrect it will suggest the correct pool.

This functionality was previously released, but was found to create warnings in error. This update has fixed the incorrect warnings.

The screenshot shows the 'Oil - Production' module interface. A 'Confirm' dialog box is displayed over the main form. The dialog box contains a warning icon and the following text:

- Drainage Unit land location is not contained within the Target Pool 232154 - Big Gully Sparky Sand Pool Land as of 2018-09-21.
- Drainage Unit Lands are in the following Pools: 232120 - Big Gully East Sparky Sand Pool as of 2018-09-21.

Below the list, there is a warning message: "There are some warning messages, do you still want to proceed anyway?!" and two buttons: "Cancel" and "Proceed Anyway".
