FOREWORD

Saskatchewan's economic achievements in recent years have been truly gratifying.

Not since the early settlement years has this Province enjoyed such sustained prosperity in income, employment and population growth.

Saskatchewan's economy continues to expand during 1977, although a trend to moderation can be expected. In particular, Saskatchewan farmers are adversely affected by low grain prices and, in some parts of the Province, by adverse weather conditions during the Fall.

Mining is an expanding Saskatchewan industry which will help to balance the slowdown in agriculture.

I look forward to 1978 with cautious optimism. If necessary, we must be prepared to respond to the consequences of slower economic growth, especially if one of these is a higher rate of unemployment for Saskatchewan residents.

Allan Blakeney,
Premier

STATISTICAL SUMMARY OF ECONOMIC INDICATORS SASKATCHEWAN

	Unit of Measure	1969	1970	1971	1972	1973	1974	1975	1976
Population (June 1)	Thousands	958	941	926	914**	905**	900**	907**	921

THE CANADIAN ECONOMY

OVERVIEW

During 1976, the Canadian economy continued to operate below capacity. Growth in the economy early in the year, which was due to inventory rebuilding, was not sustained during the last half of 1976 as the volume of Gross National Product declined in each of the last two quarters of the year. Nevertheless, the growth in the first half of the year was sufficient to generate a year-over-year real growth of 4.9 per cent compared to 1.1 per cent for 1975.

The major strength in the economy was personal expenditures where volume growth was 6.1 per cent (much of it for imports). The major weakness was investment and government spending.

Inflation moderated, but the year ended with rates of inflation still high by historical standards for most price indexes.

Very high capital borrowings abroad by the public and private sectors through the first three quarters of 1976 contributed to an appreciation of the Canadian dollar to \$1.03 U.S. Developments during the last part of the year, such as a lower Bank of Canada bank rate and reduced foreign borrowings, resulted in a very rapid devaluation of the Canadian dollar to about \$0.95 U.S. during the first quarter of 1977.

Labour force growth continued strong in 1976, but was not matched by employment creation. The result was rising unemployment throughout the year.

INTERNATIONAL TRADE

During 1976 export volumes increased 8.9 per cent mainly as a result of improved economic performance in the U.S.A. All of this export growth occurred in the first three quarters of 1976, with the growth of automobile and forestry exports being the principal contributors.

During the first three quarters of 1976, high Canadian interest rates relative to those in the U.S.A. and elsewhere, coupled with heavy borrowing requirements of Canadian governments and businesses, were responsible for record capital inflows to Canada in 1976. These capital inflows created a demand for Canadian dollars which forced the value of the Canadian dollar up 3 per cent in 1976 over 1975. Consequently Canadian import prices fell and export prices increased.

Import volumes in 1976 grew 8.2 per cent, a reflection of lower import prices and high personal expenditure growth.

On balance, the gap by which import volumes exceeded export volumes grew in 1976. However, import prices in 1976 increased by only 1.8 per cent compared with a 3.3 per cent increase for export prices. The result was a decline in the gap by which

the value of imports exceeded the value of exports of \$0.5 billion to \$4.7 billion.

The slowdown of the Canadian economy in the last quarter of 1976, together with a decline in foreign borrowings by Canadians resulted in a rapid 8 per cent decline in the value of the Canadian dollar to about \$0.95 U.S. during the first quarter of 1977. For the year 1977, the Canadian dollar should average about \$0.94 U.S.

The decline in the value of the Canadian dollar has made Canadian merchandise exports cheaper and merchandise imports more expensive. As a result, the deficit on merchandise trade volumes could be cut in half in 1977 as exports gain a price advantage in international trade and demand for imports is reduced due to increased import prices. The service trade deficit, however, will continue to grow and more than offset the improvement in the merchandise trade deficit so that the overall trade deficit will worsen by about \$200 million to \$4.9 billion. Although the value of the Canadian dollar has declined about 8 percent relative to the U.S. dollar, the U.S. dollar itself has been declining relative to other world currencies such as the German mark and Japanese yen. So, therefore, the value of the Canadian dollar has declined by more than 8 per cent relative to these other currencies.

During the first quarter of 1977, the increase in merchandise exports has been in the automobile, forestry and aluminium industries. Toward the end of 1977 and into 1978, should growth of the U.S.A. and other member countries of the Organization for Economic Co-operation and Development continue as expected, Canadian exports should be of the more fully manufactured variety as excess manufacturing capacity in these countries is reduced.

PRICES

Inflation as measured by rates of increase in the consumer price index fell to 7.5 per cent in 1976 from 10.8 per cent in 1975. This improvement was due to stable food prices throughout 1976 and the last half of 1975, and to the low price inflation of imported consumer goods during 1976. This moderating influence on price was partly offset by the price inflation in the housing component of the consumer price index of 11.1 per cent in 1976 compared with 10.0 per cent in 1975.

The devaluation of the Canadian dollar in the last quarter of 1976 (which increased import prices), the 6.7 per cent increase in food prices during the first five months of 1977, and continued energy price increases will offset any moderation in the other components of the consumer price index during 1977. Therefore, on an annual average basis, 1977 inflation of the consumer price index will remain at the 1976 level of 7.5 per cent. Prospects are good that price increases in 1978 will be 6 to 6.5 per cent,

provided the Canadian dollar remains stable at its current value. The major effect of Canadian dollar devaluation on consumer prices has already been felt.

The Gross National Expenditure price deflator (which is the most comprehensive measure of overall price movement in the economy) grew 9.5 per cent in 1976 compared with 11.2 per cent in 1975. The main contributors to sustaining this level of inflation were government current expenditure prices which grew 14.2 per cent, versus 15.5 per cent in 1975, and residential investment prices which grew 12.0 per cent compared with 13.6 per cent in 1975. During 1977, growth in the Gross National Expenditure deflator should slow to about 7.0 per cent reflecting improvement in the growth of residential investment prices to 9.3 per cent in 1977 and reflecting the sharp improvement of price inflation related to government spending from a 1976 level of 13.4 per cent to about 7.5 per cent in 1977 (due largely to lower public sector wage gains).

The price of business machinery and equipment investment on an average annual basis grew 6.7 per cent in 1976 compared with 14.1 per cent in 1975. These price trends have continued for the first half of 1977. For the last half of 1977, the expected growth in machinery and equipment investment will include a larger proportion of higher priced machinery and equipment imports so that price inflation here in 1977 is unlikely to fall below the 1976 level.

Industrial composite (excludes agriculture and public sectors) wage rates grew 12.1 per cent in 1976, down from 14.2 per cent in 1975, reflecting lower inflation, and the economic slowdown. This downward trend is expected to continue throughout 1977 leading to a 1977 growth of about 9.5 per cent.

INTEREST RATES

Short-term interest rates moved up and down in 1976. In March, 1976 the Bank of Canada rate was raised to 9½ per cent. With the growth of the Canadian economy lagging and non-residential investment demand especially slow, the Bank of Canada lowered its bank rate to 8 per cent between November, 1976 and February, 1977. In general, long-run rates have yet to respond to these short-term rate reductions in any significant way. A further bank rate reduction to 7½ per cent was made in May, 1977. On average, 1976 short-term rates were about 9.2 per cent compared with 7.9 per cent in 1975. In 1977 short-term rates should average about 7.5 per cent.

Long-term rates have remained persistently high since 1975. Mortgage rates in 1976 were about 11.8 per cent versus 11.4 per cent in 1975 reflecting strong activity in the residential market. These rates are expected to average about 10.5 per cent in 1977 as they fall throughout the year.

The price of the Canadian dollar in U.S. dollars

averaged \$1.03 U.S. in 1976 compared with a 1975 average of about \$0.995 U.S., reflecting the large capital inflows in 1976. The slowdown in these capital inflows and the loss of some cost competitiveness of Canadian industry in international markets have forced the Canadian dollar down to a range of \$0.93 U.S. to \$0.95 U.S. during the first half of 1977. For the remainder of 1977 the dollar should remain in this range as net capital flows in 1977 should be sufficient to offset a worsening balance of trade deficit.

LABOUR FORCE AND EMPLOYMENT

On an annual average basis, the labour force increased in 1976 by 248,000 persons (2.5%) over 1975 while employment increased by 209,000 jobs (2.2%). As a result, the number of unemployed increased by 39,000 persons to 736,000 persons for an average annual unemployment rate of 7.2 per cent compared with 6.9 per cent a year earlier.

The increasing unemployment rate through 1976 continues into 1977 and stands at a seasonally adjusted level of 8.1 per cent for the 2nd quarter of 1977 (or about 856,000 unemployed). For 1977 as a whole, the unemployment rate is likely to remain at about 8 per cent. For 1978, the federal and provincial job creation projects, some improvement in the Canadian economic performance and the impact of the lagged effects of the devalued dollar on employment should see the unemployment rate drop to about 7.5 per cent by year end.

This underutilization of Canadian labour resources has affected all age groups of the labour force. The prime and highly skilled employment group, aged 25-54, experienced record high unemployment rates of 4.6 per cent by the end of 1976. From 1977 to 1979 growth in the labour force age group 25-35 will be very strong.

PERSONAL INCOME

Personal income by the end of 1976 had reached 155,795 million dollars, up 14.3 per cent from a year earlier, compared with a 16.5 per cent increase during 1975. Personal disposable income grew 13.4 per cent in 1976 compared with 17.3 per cent in 1975.

For 1976, by component, wages and salaries increased 15.0 per cent versus 16.8 per cent in 1975 (the slightly higher 1976 employment growth rate being offset by the lower wage rate increases in 1976); net income of farm operators from farm production was down 20.6 per cent compared with the increase in 1975 of 18 per cent; transfers from governments rose 13.7 per cent in 1976 compared with 23.3 per cent in 1975; interest, dividends and miscellaneous investment income grew 21.6 per cent versus 11.4 per cent in 1975; and, unincorporated business income grew 13.3 per cent versus 7.3 per cent in 1975.

Real personal disposable income (personal in-

come adjusted for inflation and net of direct taxes paid to governments) grew 5.6 per cent in 1976, down from 6.1 per cent in 1975. As wage rates moderate in 1977, combined with modest employment growth and no change in inflation, real income growth in 1977 should slow even more before improving in 1978.

Personal savings rates which had reached 11 per cent in 1975, fell to 10.6 per cent in 1976 and in 1977 should continue the decline that started in the third quarter of 1976. The average for 1977 through to the end of 1978 should be a more normal 9 per cent.

CONSUMER EXPENDITURES

Consumer expenditures on goods and services were the major contributors to the growth of the Canadian economy in 1976. After adjusting for inflation, the volume of expenditures increased 6.1 per cent in 1976 compared with 5.1 per cent in 1975. Consumers were able to maintain this expenditure growth in spite of lower growth rates in real disposable income by reducing their savings rate in 1976.

This 1976 growth in the volume of consumer expenditures understates somewhat the consumer demand as the tax concessions made by Ontario in the last half of 1975 encouraged automobile purchases in 1975 which normally would have occurred in 1976.

With savings rates at more normal levels and decreased growth in real disposable personal income, growth in the volume of consumer goods and services expenditures in 1977 should decline to about 4 per cent.

Value of retail sales in 1976 grew 10.7 per cent, down from the 14.6 per cent in 1975. Retail sales in the first half of 1977 have been slow on a year-over-year basis, and this trend should continue for the remainder of 1977, in line with the expected slowdown in the growth of personal income, for an annual average growth of about 8.5 per cent for the year.

PROFITS

Corporate profits before taxes on a national accounts basis declined 0.3 per cent in 1976 after gaining 1.8 per cent in 1975. These figures reflect several special factors. First, corporate profits reflected the negative influence of slower increases in inventory valuation as inflation receded. Second, appreciation of the Canadian dollar, together with modest 1976 industrial world economic growth, reduced profit margins on exported goods. Finally, the sluggish performance of the Canadian economy also contributed to restrained profit margins.

Profits should show substantial growth in 1977 as a result of the devalued Canadian dollar, improved economic growth in Canada's trading partners, and slower rates of inflation. The major profit increases will be in the resource based ex-

porting industries. In 1978 profit growth should be more widespread across industries as the Canadian economy expands and as export markets for more fully manufactured products improve.

CAPITAL FORMATION

The total current dollar value of expenditures for capital formation in 1976 reached \$44.3 billion compared with \$40.1 billion in 1975. After allowing for inflation, the volume of capital formation in 1976 grew 0.8 per cent versus 3.9 per cent in 1975. Had it not been for the 17.7 per cent growth in the volume of residential capital formation in 1976, total capital formation would have had a negative growth rate as all other capital formation volumes were down (non-residential private capital formation was down 3.2 per cent).

Capital formation in 1976 was restrained by restricted government spending along with excess industrial capacity, the high cost of external financing and reduced business cash flows. The outlook for 1977 is somewhat brighter although the mix is different. The volume of residential capital formation is expected to decline about 3.5 per cent partly due to inventory build up of single-family homes. This will be offset by an increased volume of capital formation in energy-related projects and in some resource based export industries. Non-residential capital formation should grow about 2 per cent in 1977.

In 1978 the rate of capital formation should increase with improved economic conditions and cheaper financing.

CONCLUSION

The pause in the economic recovery that occurred in the third quarter of 1976 continues through the first half of 1977. The Canadian economy is expected to exhibit more healthy growth in the latter half of 1977 and in 1978, as domestic demand improves.

During 1977, final domestic demand (personal expenditures on goods and services plus government current expenditures plus investment) will be weak, growing only about 3 per cent in real terms; growth in 1978 will improve moderately to 4.5 per cent, still well below potential growth.

Canada's major trading partners, particularly the U.S.A., are expected to have real growth rates of 5 to 5.5 per cent in 1977 and 1978, so providing the potential for growth in Canadian exports of about 6.5 per cent and 4.5 per cent in 1977 and 1978, respectively.

The net result of foreign and domestic demand growth in 1977 and 1978 will be an increase in the volume of Gross National Product in 1977 of 3 per cent (with greater strength in the second half of the year) and in 1978 of 4.5 to 5 per cent. With such increases in output, employment growth will not be sufficient to absorb the expanding labour force. This suggests an unemployment rate in 1977 of 8 per cent and in 1978 of about 7.5 per cent.

THE SASKATCHEWAN ECONOMY

OVERVIEW

In 1976 the Saskatchewan economy continued to enjoy prosperity although the rate of economic expansion was more moderate than that experienced in the previous three years. A large measure of the economic growth in 1976 may be accounted for by employment increases in the service and construction industries. These, in turn, were the result of substantial increases in the level of consumer and investment expenditures. Agriculture, on the other hand, provided a restraint to economic growth as most measures of agricultural income showed a decline. The moderation of economic activity in the Province is shown by the decline in the rate of growth of Gross Domestic Product from 35.2 per cent, 30.0 per cent and 10.5 per cent in 1973, 1974 and 1975, respectively to 9.3 per cent in 1976. Saskatchewan's Gross Domestic Product at market prices, the total market value of all goods and services produced in the Province during the year, reached \$7,377 million.

POPULATION AND LABOUR FORCE CHARACTERISTICS

Employment in the Province continued to expand rapidly during 1976. The average number employed during the year increased by 3.8 per cent to reach 387,000. This increase of 14,000 was only slightly below the peak annual increase for the 1970's of 16,000 achieved during 1975. The continuation of high employment growth during 1976 was largely attributable to increased levels of employment in the service and construction industries.

The relatively bright economic prospects in Saskatchewan has continued to attract people to the Province. This, along with a large influx of young entrants to the labour force and increased levels of female participation, contributed to an increase of 4.9 per cent to the average labour force during 1976, to 403,000. Given an increase in the labour force greater than the employment increase, Saskatchewan's 1976 average unemployment rate increased to 4.0 per cent from 2.9 per cent in 1975.

The rate of employment expansion has been instrumental in bringing about net in-migration to the Province again in 1976. Assisted by this, Saskatchewan's population grew to 931,000 by January 1, 1977 with 8,000 of the year's population growth occurring in the last six months of the year.

In 1977, Saskatchewan's employment expansion has continued as the average level of employment for the first eight months is 3.9 per cent higher than the average for the same period in 1976. Even with some moderation in the rate of employment expansion during the last part of the year, the average level of employment in 1977 is expected to grow by 9 to 11 thousand over the average for 1976. During

1978, employment growth may moderate. With an expected labour force growth of near 4 per cent in 1977, the annual unemployment rate will be around 5 per cent. In 1978, a similar or slightly higher unemployment rate is expected.

Saskatchewan's population is expected to grow to 938,000-940,000 by the end of 1977 with continuing growth in 1978.

AGRICULTURE

In 1976, Saskatchewan farmers harvested a record grain crop. Wheat production in the Province reached 548 million bushels, 11 million bushels higher than the level achieved in 1966. This was accompanied by excellent crop production in other major grain producing parts of the world, resulting in reduced world grain prices. The Canadian Wheat Board's Thunder Bay export price for #1 CW, 13.5 per cent protein wheat fluctuated between \$3.20 per bushel and \$3.35 per bushel for most of the period from August 1 to year end, a drop in the range of \$2 per bushel from a year earlier.

Farm cash receipts in Saskatchewan declined by 7.4 per cent to \$2,286 million in 1976. Canadian Wheat Board final payments made to farmers on grain delivered prior to 1976 were \$286 million, down by about \$336 million from final and interim payments made by the Canadian Wheat Board in 1975. Lower initial prices paid by the Canadian Wheat Board during the whole of the 1976-77 crop year was another factor contributing to lower cash receipts. Total receipts from livestock and livestock products was up slightly to \$455 million from \$444 million in 1975. Receipts from the sale of cattle and calves remained at a steady level, although the number marketed was down. Receipts to farmers from the sale of hogs was down by 11.6 per cent accompanied by a 13.0 per cent decline in the number marketed.

Agricultural cash receipts are expected to register a slight decline again in 1977, in spite of the prospect of a fairly large grain harvest. Canadian Wheat Board final payments made in 1977 to Saskatchewan farmers totalled \$115.6 million, a \$170 million reduction from the amount of the final payments made in 1976. This, plus lower receipts for grain deliveries will account for most of the decline. By 1978 the level of cash receipts should begin to rise again. The change to an upward trend will be strengthened if a payment is made from the Western Grain Stabilization Fund in 1978 based on 1977 receipts.

Realized net income (income to the farmer after operating and depreciation expenses, but not including inventory changes) declined by 22 per cent in 1976 to \$1,148 million. Total net income of farm operators (which includes inventory changes) registered a slightly lower decline of 5.3 per cent to

\$1,424 million, reflecting the relatively high level of grain production in 1976.

Farm operating and depreciation expenses increased by 14.3 per cent during 1976 accounting for the higher rate of decline in realized net income than in cash receipts.

The realized net income position of farmers in 1977 will show some decline again as cash receipts for the year decline and as farm operating and depreciation costs continue to rise. With reasonable assurance of a high level of grain production in 1977 (much of which will be marketed in 1978) and assuming normal levels of 1978 production, the realized net income position of Saskatchewan farmers in 1978 will depend on the movement of agricultural prices relative to the anticipated increase of farm input costs.

PERSONAL INCOME

The decline in farm income did not have any significant impact on the level of Saskatchewan non-farm personal income in 1976. Total 1976 personal income for the Province increased by 10.9 per cent to \$6,227 million as incomes of the non-agricultural sectors grew substantially. Wages and salaries and supplementary labour income increased 18.1 per cent to \$3,200 million as average weekly wages and salaries increased by 14.2 per cent (excluding agriculture) in conjunction with an increase of 3.8 per cent in employment during the year. Non-farm unincorporated business income increased by 10.1 per cent while income from interest, dividends and miscellaneous investment income increased by 18.1 per cent. The farm component of personal income (which includes inventory changes) declined by 5 per cent to \$1,358 million.

Personal income per capita in Saskatchewan increased by 9.2 per cent to \$6,761 during 1976.

In 1977, an expansion of 2.5 to 3 per cent in employment and some increase in wage rates should ensure an increase in wages and salaries and supplementary income of about 13 per cent for the year. While the non-agriculture components all continue to grow, the expected decline in the farm component for 1977 will hold the rate of increase in total personal income to a low level.

VALUE ADDED IN GOODS PRODUCING INDUSTRIES

The value added by Saskatchewan's goods producing industries in 1976 is estimated at \$4,248 million, up 14.3 per cent from 1975. Output in agriculture was a major contributor as the value added in that industry increased by 16.7 per cent during the year to reach an estimated level of \$2,200 million. The share of total value added, attributable to agriculture, increased from 50.7 per cent in 1975

to 51.8 per cent in 1976. The non-agricultural goods producing industries increased their value added by 11.8 per cent to reach a level of \$2,048 million. The most significant performance within this group was shown by the construction industry which increased its contribution to Saskatchewan's 1976 current dollar economic output by 26.6 per cent to a level of \$675 million.

Agriculture's contribution to value added is expected to drop in 1977, mainly because of a reduction in the level of grain production from the abnormal level reached in 1976. As a result, total value added by all goods producing industries is expected to show only marginal growth in 1977.

VALUE OF MINERAL PRODUCTION

Mineral production in Saskatchewan reached a value of \$962.5 million in 1976, up 3.9 per cent from 1975. The value of production of metals exhibited the most dramatic increase with a percentage gain of 160 per cent. Uranium production provided the brightest performance within this group of minerals — and within the total mining sector. The volume of uranium production increased by 238 per cent in 1976 as the Rabbit Lake uranium mine operated for the year. The value of uranium production increased by 273 per cent to a level of \$58.5 million.

Total fuel production increased in value by 11 per cent in 1976 to \$478.6 million. Coal production increased by 32.3 per cent, which together with increased prices, resulted in about a 55 per cent increase in the value of coal production. The volume of petroleum production for the year declined by 5.3 per cent, however, this was more than offset by higher prices and the value of production increased by 9.2 per cent to \$443.3 million.

A temporary squeeze on potash prices and some reduction in the volume of production resulted in a decline in the 1976 value of potash production of 16.8 per cent to \$346.9 million.

Mining activity will be a major area of expansion during 1977 and 1978. The total value of mineral production is expected to reach about \$1,161 million in 1977, an increase in the area of 20 per cent over 1976. The value of petroleum production is expected to increase by approximately 25 per cent in 1977, reflecting both higher prices and higher volumes of production. Similarly, higher levels of production and price are expected to boost the value of 1977 uranium production by 85 per cent or more. The production of potash is expected to increase in volume during 1977 accounting for an increase in the value of potash production of 9 to 10 per cent.

INVESTMENT

Investment expenditures provided a major driving force in the Saskatchewan economy during 1976. Total private and public investment, consisting of all new construction, new machinery and equipment and repairs totalled \$2,665.6 million, a 17.9 per

cent increase over 1975. The major investment increases occurred in agriculture, housing, government departments and institutions, and the utility industries.

Capital expenditures on new construction increased by 25.7 per cent from \$922.9 million in 1975 to \$1,160 million in 1976. Of the total investment in new construction, 39.9 per cent was accounted for by housing compared to 35.2 per cent in 1975. Total investment in new machinery and equipment increased to \$985.4 million, up by 15 per cent from 1975. Agricultural investment in new machinery and equipment, which increased by 21.2 per cent in 1976, made up 58.3 per cent of the total. The utility industries increased their investment in new construction by 25.5 per cent and in new machinery and equipment by 14.7 per cent.

Housing construction remained very buoyant in Saskatchewan in 1976 as housing starts reached a new annual high of 13,143, an increase of 2,638 (25.1 per cent) over the previous record in 1975. Apartments accounted for 31.8 per cent of the total starts in 1976 compared to 20.8 per cent in 1975. Single-dwelling residential construction showed relatively more growth outside the two major urban centres of Saskatchewan as the combined number of starts of single dwellings in Regina and Saskatoon fell absolutely and as a percentage of the provincial total during the year. Total dwelling units completed in Saskatchewan during 1976 reached 11,046, an increase of 3,341 (43.4 per cent) over 1975.

During the first six months of 1977 dwelling unit starts increased by 22.2 per cent over the same period in 1976. Continuing low apartment vacancy rates have been a major factor in maintaining a high level of residential construction. The shift toward apartment construction, which began in 1976, has become more pronounced in 1977. Given the 1977 performance to date, the number of dwelling unit starts may be expected to reach approximately 12,000 by the year-end.

Total investment expenditures in Saskatchewan for 1977 are expected to reach \$2,874.4 million, up 7.8 per cent from the level recorded for 1976. The major investment increases are in the mining, utility, and trade and finance industries. Continued investment growth associated mainly with mining is anticipated for 1978.

MANUFACTURING

The manufacturing sector in Saskatchewan displayed moderate growth during 1976. The number of employees in the industry increased by 2.5 per cent to an average of 19,700. The value of shipments

of manufactured goods in Saskatchewan totalled \$1,218 million in 1976, an increase of 3.5 per cent from the level reached in 1975. The value of shipments from the food and beverage industry, which accounted for about 40 percent of the total value of shipments in 1976, grew by 6.2 per cent to \$462.0 million.

Total investment in manufacturing in Saskatchewan increased by \$2.2 million (2.5 per cent) to a level of \$91.3 million during 1976. The increase was attributable to the food and beverage industries.

During the first five months of 1977 the value of manufacturing shipments was up by 11.2 per cent over the same period in 1976, with a growth of 10.6 per cent in the value of shipments of food and beverages. Total investment in manufacturing is expected to be up by 3.9 per cent to \$94.9 million in 1977 with all of the increase taking place outside the food and beverage industry.

RETAIL TRADE

The healthy growth in Saskatchewan personal income and consumer expenditures has been reflected in a 1976 retail sales increase for the Province of 12.5 per cent to \$2,522 million. Most categories of sales registered an increase with sales of household appliance outlets and service stations among those with the highest growth rates.

The value of retail sales for the first six months of 1977 was up by 4.0 per cent over the 1976 on a seasonally adjusted basis. With some moderation in the growth of personal income and consumer demand, the value of retail sales growth may be expected to continue in 1977, but at a slightly lower rate than in 1976.

CONCLUSION

The Saskatchewan economy continued to experience a moderate, but stable, rate of growth during 1976.

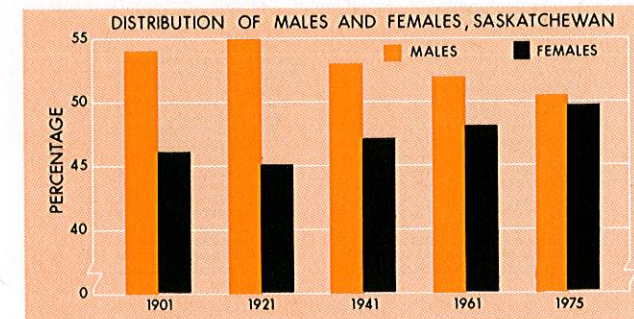

Any decline in the Province's Gross Domestic Product growth rate during 1977 will be mainly attributable to a decline in agricultural production from the bumper level of 1976. The non-agricultural part of the economy, which is expected to experience a continuation of real output growth during 1977, appears to be providing a more stable economic base for the Province than was the case during previous downturns in agricultural prosperity. Higher uranium and petroleum production combined will make the mining sector the strongest area in the provincial economy during 1977.
