

## Industry Tip

---

### Automatic Hiding of Wellbores and Well Completions

Date	Module/Application/Functionality	Notes
December 5, 2018	Well and Facility Infrastructure,	5.17 Release

Currently in IRIS, pending well completions and pending wellbores whose authorizations have expired, and are therefore not able to be reported on, remain visible on the list of completions and wellbores, which has led to some confusion. With the new release, these completions and wellbores will be hidden when they are no longer eligible to be reported on.

A pending well completion or wellbore is no longer eligible to be reported on after the date of the authorization's expiration plus seven days. The system will now send a reminder notification 30 days prior to an authorization's expiration date. Additionally, a second notification will be sent on the day of the authorization's expiration, giving a user seven days to report any completed activity, as per Directive PNG013.

For more information on reporting data in IRIS, please see [Directive PNG013: Well Data Submission Requirements](#).
